## **AMENDMENTS TO THE CLAIMS**

Claim 1 (Cancelled).

- 2. (Currently amended) The electronic flash device as defined in elaim 1 claim 28, wherein the electronic flash light source at least one light emitting diode comprises R, G and B light emitting diodes.
- 3. (Currently amended) The electronic flash device as defined in claim 2, further comprising:

a color temperature setting device that manually sets a color temperature of the light emitted from the electronic flash-light source,

wherein the light emission control device controls ratios between light emission amounts of the R, G and B light emitting diodes so that a color temperature of the light emitted from the electronic flash light source-becomes the color temperature set by the color temperature setting device.

4. (Currently amended) The electronic flash device as defined in claim 2, further comprising:

a color temperature determining device that determines a color temperature of subject light,

wherein the light emission control device controls ratios between light emission amounts of the R, G and B light emitting diodes so that a color temperature of the light emitted from the electronic flash light source becomes the color temperature determined by the color temperature determining device.

5. (Currently amended) The electronic flash device as defined in elaim 1 claim 28, further comprising: wherein

the power supply device comprises a capacitor with a large capacity that is charged by a battery, and

wherein the light emission control device supplies the electric energy from the capacitor to the at least one light emitting diode.

6. (Currently amended) The electronic flash device as defined in elaim 1 claim 28, further comprising:

a temperature sensor that determines a peripheral temperature of the <u>at least one</u> light emitting diode,

wherein the light emission control device controls the electric energy to obtain a desired light emission amount according to the peripheral temperature determined by the temperature sensor.

Claims 7-9 (Cancelled).

10. (Currently amended) The electronic flash device as defined in elaim 9 claim 4, wherein the color temperature determining device has determining devices that convert color components of the subject light into electric signals and determines the color temperature of the subject light according to a ratio between determination signals of the determining devices.

11. (Currently amended) The electronic flash device as defined in elaim 9 claim 4, wherein the color temperature determining device determines the color temperature of the subject light according to color image signals of a subject image captured by an imaging device of the camera.

Claims 12-14 (Cancelled).

15. (Currently amended) The electronic flash device as defined in elaim 12 claim 28, further comprising:

an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash; and

a temperature sensor that determines a peripheral temperature of the light emitting device at least one light emitting diode,

wherein the adjusting device controls the electric an energy provided to the electronic flash to obtain a desired light emission amount according to the peripheral temperature determined by the temperature sensor.

Claims 16-18 (Cancelled).

19. (Currently amended) The electronic flash device as defined in claim 18, wherein the adjusting device comprises: claim 3 or 4 further comprising an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash, the adjusting device including:

a light adjusting sensor that determines one of an amount of reflected light from a subject emitted from one of the R, G and B light emitting devices diodes of which light emitting amount is smallest among the R, G and B light emitting devices diodes and an amount of reflected light from the subject emitted from the R, G and B light emitting devices diodes;

a first light emission controlling device that stops light emission of the one of the R, G and B light emitting devices diodes when the one of the amounts determined by the light adjusting sensor reaches a predetermined reference value according to the ratios between the light emitting amounts from the R, G and B light emitting devices diodes;

a measuring device that measures a light emitting time of the one of the R, G and B light emitting devices diodes;

a calculating device that calculates light emitting times of others of the R, G and B light emitting devices diodes according to the light emitting time measured by the measuring device and the ratios between the light emitting amounts from the R, G and B light emitting devices diodes; and

a second light emission controlling device that stops light emission of the others of the R, G and B light emitting devices diodes according to the light emitting times calculated by the calculating device.

- 20. (Currently amended) The electronic flash device as defined in elaim 18, wherein the adjusting device comprises: claim 3 further comprising an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash, the adjusting device including:
- a device that turns on and off the R, G and B light emitting devices diodes with duty ratios corresponding to the ratios between the light emitting amounts from the R, G and B light emitting devices diodes;
- a light adjusting sensor that determines an amount of reflected light from a subject emitted from the R, G and B light emitting devices; and
- a light emission controlling device that stops light emission of the R, G and B light emitting devices diodes when the amount determined by the light adjusting sensor reaches a predetermined reference value.
- 21. (Currently amended) The electronic flash device as defined in claim 18, wherein the adjusting device comprises: 3 further comprising an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash, the adjusting device including:
- a device that turns on and off R, G and B light emitting devices diodes of numbers according to the ratios between the light emitting amounts from the R, G and B light emitting devices diodes;
- a light adjusting sensor that determines an amount of reflected light from a subject emitted from the R, G and B light emitting devices diodes; and
- a light emission controlling device that stops light emission of the R, G and B light emitting devices diodes when the amount determined by the light adjusting sensor reaches a predetermined reference value.

Claims 22-27 (Cancelled).

## 28. (New) A device comprising:

a tubeless electronic flash mountable on or in a portable camera and comprising at least one light emitting diode;

Docket No.: 0879-0344P

- a power supply device; and
- a light emission control device connected to the power supply device and the tubeless electronic flash for supplying electric charge to the at least one light emitting diode for causing the tubeless electronic flash to illuminate an object to be photographed in synchronism with a shutter.

## 29. (New) The device as defined in claim 28, wherein:

the power supply device comprises a booster device which boosts output voltage of a battery and a capacitor with large capacity that is charged by the voltage boosted by the booster device, and

the light emission control device supplies the electric energy from the capacitor to the light emitting diodes.

- 30. (New) The device as defined in claim 4 further comprising an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash, the adjusting device including:
- a device that turns on and off the R, G and B light emitting diodes with duty ratios corresponding to the ratios between the light emitting amounts from the R, G and B light emitting diodes;
- a light adjusting sensor that determines an amount of reflected light from a subject emitted from the R, G and B light emitting devices; and
- a light emission controlling device that stops light emission of the R, G and B light emitting diodes when the amount determined by the light adjusting sensor reaches a predetermined reference value.

- 31. (New) The device as defined in claim 4 further comprising an adjusting device that adjusts a color temperature of the electronic flash light emitted from the electronic flash, the adjusting device including:
- a device that turns on and off R, G and B light emitting diodes of numbers according to the ratios between the light emitting amounts from the R, G and B light emitting diodes;
- a light adjusting sensor that determines an amount of reflected light from a subject emitted from the R, G and B light emitting diodes; and
- a light emission controlling device that stops light emission of the R, G and B light emitting diodes when the amount determined by the light adjusting sensor reaches a predetermined reference value.
